Reginald Huey Tan Ian Jay was a student of the School of Science and Technology, Singapore (SST) from 2018 to 2021.

A keen learner, Reginald perseveres through challenges to hone his critical thinking skills, particularly in Mathematics and Computing. He is also a compassionate individual who demonstrates sincere willingness to lend a helping hand to those in need. His warm personality wins him the trust and rapport of his peers.

Reginald displayed a strong interest in the fields of Mathematics and Computing and participated in numerous competitions in these areas, honing his critical thinking skills. For example, he took part in the Singapore and Asian Schools Mathematics Olympiad in 2018 and the Design Thinking with Robotics and Computational Thinking International Competition in 2019 and 2021, attaining a Bronze award for his performance in 2021. He also participated in Bebras, an international challenge on Informatics and Computational Thinking, in 2020 and 2021, to further sharpen his algorithmic thinking skills. In each competition, Reginald entered with a positive mindset to learn something new, and applied his creative thinking skills to come up with innovative solutions to solve the given problems.

Reginald also showed passion in his Co-Curricular Activity, Fencing. For example, he participated in the National School Games (NSG) Fencing Championships in 2019, and the Novices Fencing Championships in 2019 and 2020. An active sportsman, he also took up Taekwondo and was ranked among the top two positions in several individual competitions from 2018 to 2020. Some of his notable achievements include a First Place award in the Singapore National Games and a Second Place award in the Singapore Youth Olympic Festival in 2018. In 2019, he was awarded Second Place in both the Singapore National Taekwondo Championships and the NSG Championships. For his outstanding achievements, he was accorded a Colours Award by the Singapore School Sports Council in 2019.

As a dedicated Active Citizenship Education (ACE) leader from 2019 to 2021, Reginald devoted much of his time in service of the local and global communities. He was first inspired by his Overseas Learning Experience to Vietnam in 2019, where he visited a local community to learn about the challenges they faced in their daily life. With his schoolmates, he built solar panels to provide the community with electricity and painted their homes. Reginald also volunteered at the Singapore Cancer Society (SCS) and was appointed as the ACE Project Manager for several fundraising and advocacy events in partnership with the SCS in 2020, including Relay for Life, a fundraiser for cancer patients. In this capacity, Reginald executed his duties with confidence and courage, honing his communication skills through liaising with the SCS and collaborating with his peers to ensure a smooth running of the events. To inspire a next generation of SST students to serve the community, he mentored his Secondary 3 juniors before he handed over the advocacy projects with the SCS to them.

With his commitment to learning and empathy for others, Reginald is a promising individual who has both the knowledge and the heart to make significant contributions to the community in the future.
